

## **A Business Database to Facilitate Multiple Medical Specialty Site Examination, Report Generation and Fee Encoding**

**Sheldon Stein, M.D.** Director, Section of Orthopaedic Surgery  
Neumann Medical Center Philadelphia, PA 19125  
**Dr. Sushil DasGupta** Electrical Engineering Department  
Temple University Philadelphia, PA 19122

The purpose of this system is to facilitate the ease and accuracy of scheduling multiple patients, for different types of medical evaluations, at different locations, by one or more independent examiners, simultaneously. The system is able to integrate these multiple examiner and site schedules, and print appropriate lists. Taken into account is the fact that, other entities such as attorneys, insurance companies and third party providers can impact on the scheduling process. Reports can be generated at any level of the system.

The system is designed with multiple built-in safeguards to prevent any inadvertent scheduling omission. The system also guarantees all services are appropriately billed. The system is also designed to accommodate other ancillary services such as peer review, chart review and bill audits.

This system offers the following advantages:

The office, business and practice management become easier, more effective and efficient. No show, canceled or changed appointments are securely tracked.

The system is meant to be extremely user friendly. Many of the functions are point and

click, enabling the user to open up related fields on the screen with ease, and a minimum of training. The error potential is controlled by built in safeguards. The system is completely networkable, and can be linked to other software applications.

The system enables the user to create various reports, letters and reviews. All these features are geared to simplifying scheduling, scheduling patient recall, multiple appointments, letter and report generation..

The system will allow multiple booking in the same time slots. It will be able to track report or record generation for each patient and appropriate submission and billing for each record.

Appointment letters are automatically generated, to the patient, examinee attorney and/or other third party as necessary.

Password protection assures appropriate access to all areas of the system. Financial parameters, including billing, accounts due and accounts receivable, are secure and linked to each individual appointment.
